

Concrete Society Scotland Region Bulk Powder Handling

Best Western Garfield House Hotel

Cumbernauld Road, Stepps

Glasgow G33 6HW

Tuesday 29th 2022

18:30pm – 20:00pm

The Concrete Society Scotland Region is pleased to announce our rearranged date for the latest in our series of events supporting the concrete industry in Scotland.

The movement of cement, PFA, GGBS, pigments & powders from manufacture to finished product not only involves some interesting stops along the way but carries its own significant challenges in safety, quality, and environmental issues. This presentation aims to give an insight into the various transportation methods, an understanding of the equipment employed, and the maintenance required to ensure safe handling of these products. The dangers and costs of getting things wrong will also be showcased.

It is envisaged that this topic will be of interest across a wide spectrum of the industry including production, maintenance, transportation, H&S and quality personnel
