Devon and Cornwall Technical Visit Derriford Hospital

Tilbury Douglas are offering up to 12 attendees to visit Derriford Hospital and showcase the technical complexities of delivering state-of-the-art oncology treatment facilities.

The UHP oncology unit extension is situated within a former courtyard car park. It consists of a two-story reinforced concrete frame, a steel-framed third story, and single-story steel sections. Features include concrete medical linear accelerator (LINAC) and High Dose-Rate Brachytherapy (HDR) bunkers, recovery rooms, and open-plan office for treatment planning.

Adrian Izod, Project Manager at Tilbury Douglas, will give an insightful presentation about the project, followed by Mark Moriarty from LKAB Minerals. This will be followed by a Light lunch and a show round the site.
